Dear Esteemed Admission Committee,

RE: RECOMMENDATION FOR HONESTY GEORGES NGONYANI

Honesty Ngonyani was a student at Kibaha for two years and I was his Advanced Physics teacher throughout the time. Honesty is an exceptional student who has always maintained high performances in and out of the class. His outstanding performance in the final examinations, where he got division 1.5 in physics, chemistry and Mathematics. This marked an attestation of his diligence and dedication to excel in our rigorous academic setting.

Honesty and I had a really interactive relationship. He regularly came into my office to share his desire to transform the life in his district with education and technology as the main tool. Overtime, I've seen him channeling his desire by integrating himself with multiple related opportunities available at our school. I believe his involvement has profoundly shaped him to be the changemaker he wants to be. In the two years I have known him, he has consistently shown a remarkable ability to balance his academic responsibilities with his extracurricular passions. Whether he is immersed in the demanding activities of the Uwezo Club, where he tackles pressing school and societal issues, or thriving in debating and football, Honesty skillfully navigates his diverse interests while maintaining strong academic performance. This impressive balance speaks to his discipline and time management abilities.

In the competitive environment of a high school Physics class, It is commendable to see a student who understands the importance of collective effort and strives for outcomes that benefit the entire group, aligning with a more socially conscious approach. Honesty's selfless commitment to assisting his peers is truly remarkable. I remember in his final year of high school when the classes' mock results were released, which weren't good enough, he proposed a solution to me which turned out to be effective. As the class members were always scattered in the preparation of the exams, he suggested that all the final-year students should be put in one room, which was the dining hall, and groups with students of varying performance to be formed for thorough revisions and discussions of the topics. The results were monumental. Not only did the class performance improve, but also the cooperation among class members increased. I'm convinced that Honesty mirrors promising success wherever he goes.

In addition to being his Advanced Physics teacher, I also served as the guardian of his religious sect at school, where Honesty was a sports and social chairperson. I have always been

captivated by Honesty's creative ways in fundraising efforts for the church. We were able to buy a drum and piano during his leadership, something that took years to be accomplished. Moreover, Honesty has been a catalyst for interaction of different religious sects at school via the sports department he's in. Though initially faced with resistance, he organized a football league for all six religions which turned out to be the most celebrated tournament at Kibaha Secondary School. What I won't forget about this young man is his attitude towards communal responsibilities. Honesty approached his responsibilities with a personal commitment, treating each task as if it were his own. Indeed, I will always remember him for his productivity and creation.

Furthermore, Honesty's impact extends in many other areas, particularly through his leadership in the 'Kibaha Uwezo Club.' In 2022, they participated in UWEZO national exhibitions, where they conducted numerous projects ranging from school to regional level. The project that captivated me the most was renovating the school's vegetable garden which had been swayed by the heavy rains of the season. As the club's secretary, he demonstrated strong leadership which was pivotal for their victory. They won second place earning 1000 dollars, which unlike most past club's leaders, who misappropriated funds, they directed it towards buying materials for designing teaching aids at a nearby Tumbi primary school. Honesty's talent towards mobilizing and inspiring others to work towards a shared vision has been exemplary. His commitment to service had made him one of the great assets at our school.

Most importantly, Honesty's character and admirable behaviour he consistently displayed towards his fellow students, other staff, and myself was extraordinary. He truly is a wonderful young man who echoes success wherever he goes. In addition, Honesty has never appeared on any lists of my misbehaving students, I cannot recall even having to discipline him for any misconduct. Staff members are particularly captivated by the level of respect he shows whenever they encounter him. Personally, I cannot wait to see what this young man can achieve in life.

Over the time, I have seen Honesty growing remarkably self-aware, confident and flourishing with intellectual vitality. To me, Honesty is a student of unparalleled promise. I have no doubt that Honesty will make meaningful contributions to your community. Please feel free to contact me at richardkunyan@gmail.com in case you require any additional information about Honesty.

With appreciation,
Rabach Richard Kokunyan,
Advanced Physics Teacher,
Physics department.
